

Mesa Labs

NetSuite Case Study

Company Overview

Headquarters

Denver, Colorado
Offices in 3 Countries and 8 States

Industry

Manufacturing; Process Validation, Monitoring Instruments, Consumables

Eide Bailly Solution

NetSuite ERP Implementation
NetSuite Support

Results

Scalable, Localized Solution Across Multiple Locations and Languages
Robust Inventory and Manufacturing Management

Getting the Right Implementation

You know that saying “one-size-fits-all?” Well, that’s rarely the case with ERP implementations. And even less so when looking at implementation partners.

When Mesa Labs – a 30-year-old, multi-national device manufacturing company based in Denver, Colo. – was looking to upgrade their legacy accounting system, they went through the correct steps to find their right ERP fit. But it wasn’t until they were in the middle of their NetSuite implementation that they realized they hadn’t found the right implementation partner.

“Frankly, I think we would have either not gone live or it would have been a much more arduous, risk-prone process had we not engaged Eide Bailly when we did.”

ANTHONY NUSBAUM
Corporate Controller | Mesa Labs

Mesa realized the skills and needs of their internal team required a more hands-on implementation approach, and the style of their original implementation partner was simply not a fit. They turned to our team in Denver to get their NetSuite implementation back on track. And they haven’t looked back.

“It was a really dramatic change I think for Mesa, specifically for us on the implementation team. There was a lot more hand holding, a lot more solution-ing. We used Eide Bailly for implementation guidance, actual implementation work, scripting. We purchased one of the modules that Eide Bailly has developed internally. And it’s been a successful relationship, and an ongoing one.”
